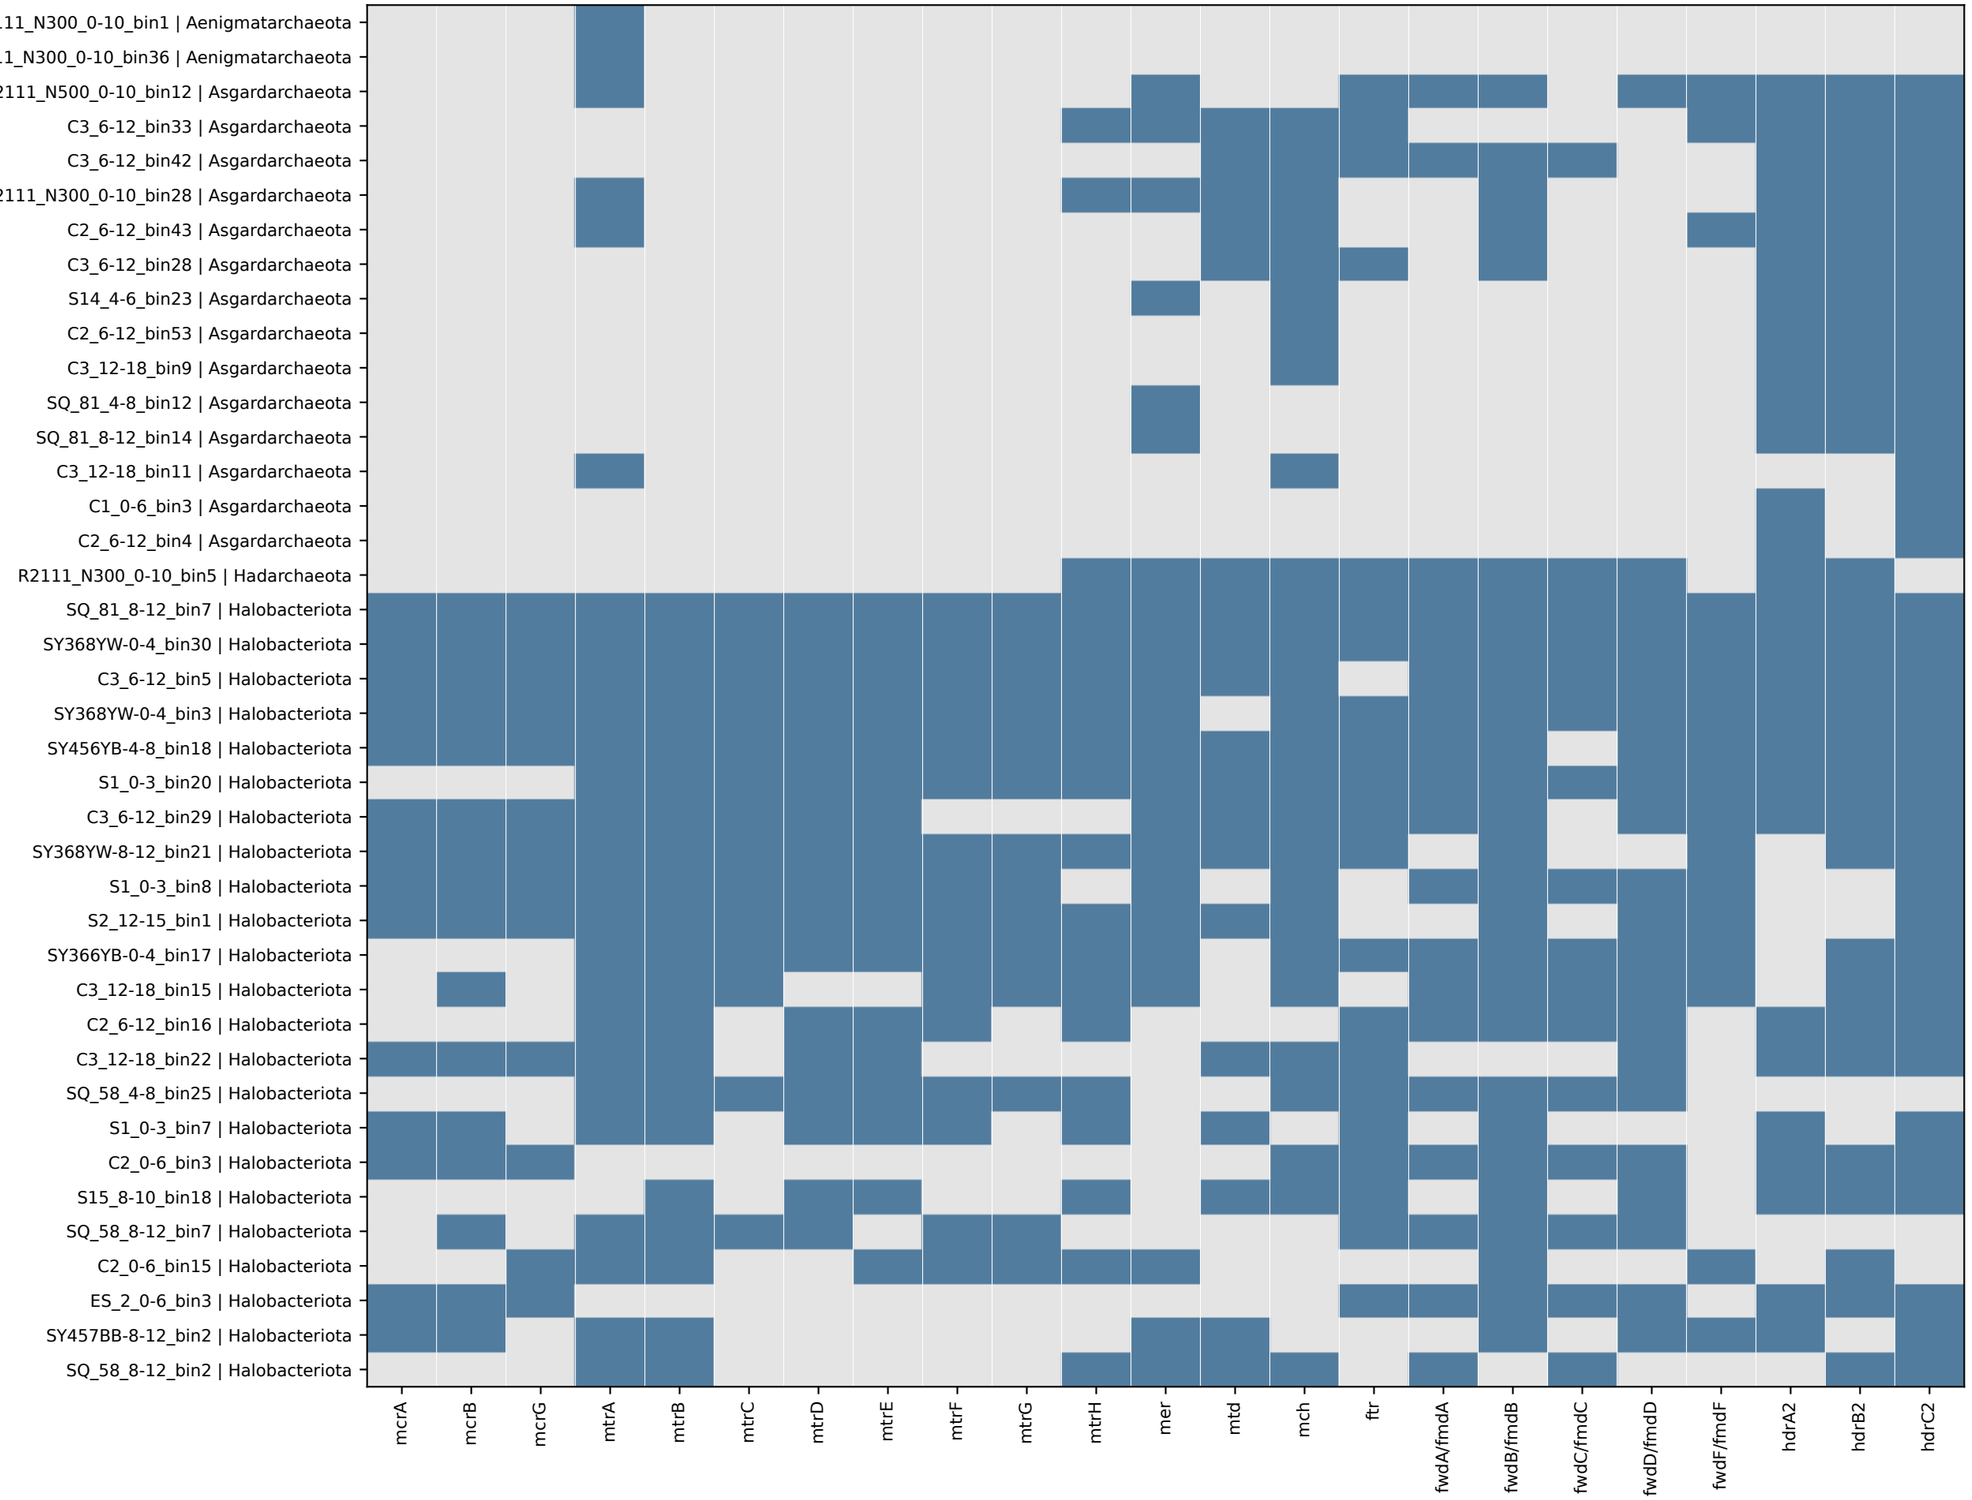
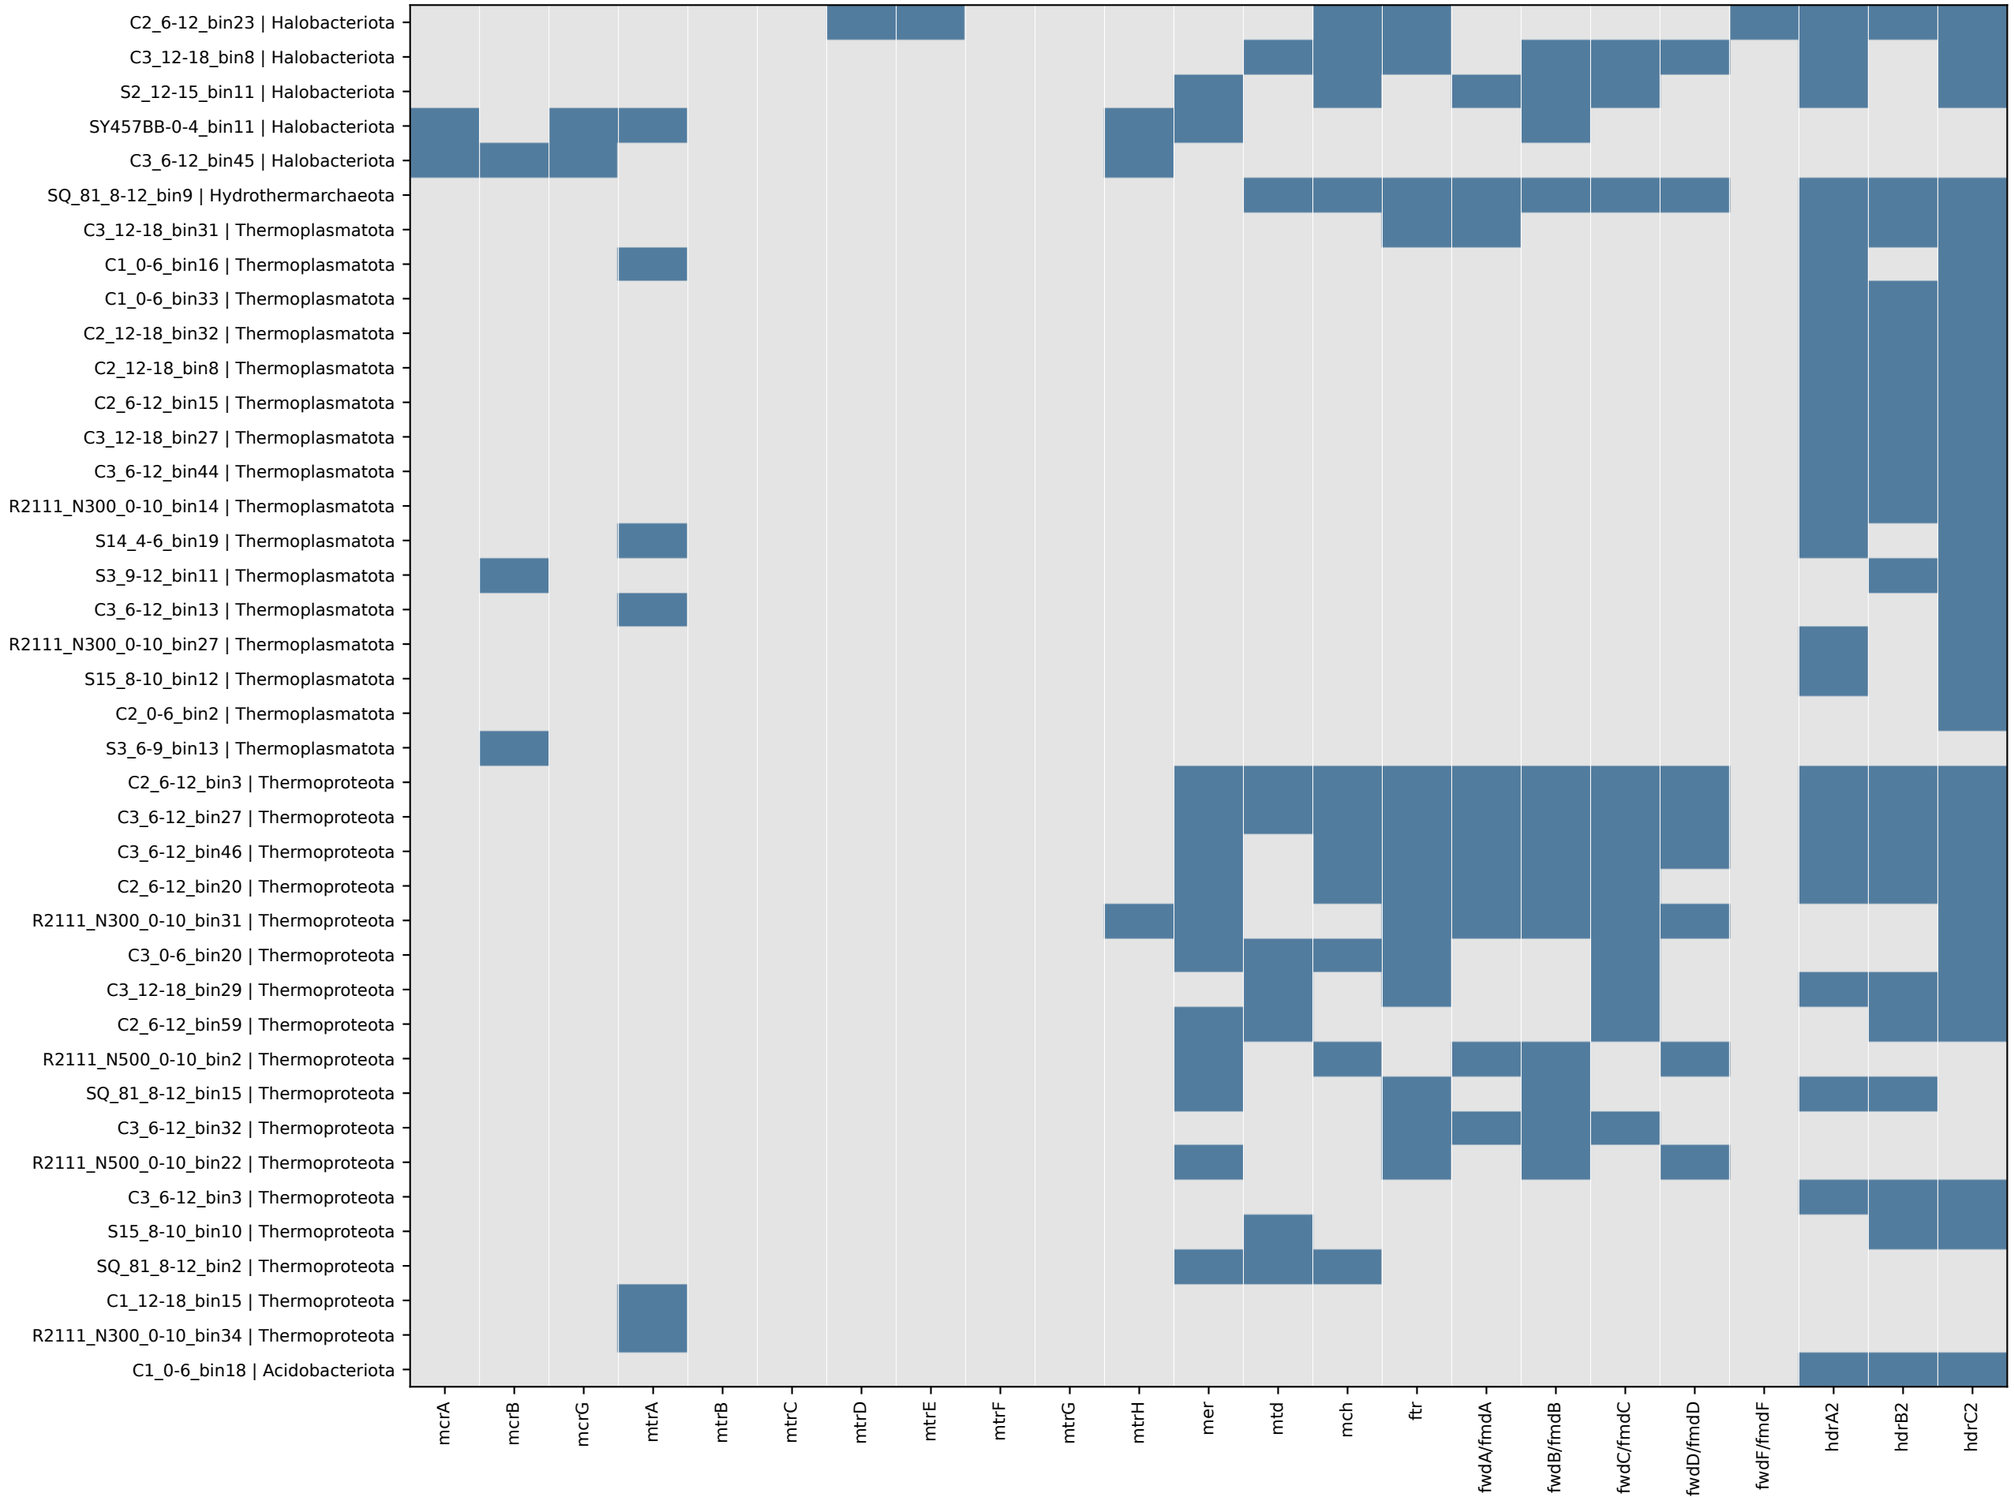
All target-gene carriers: 1–40 of 347 (gene detection, no tree)



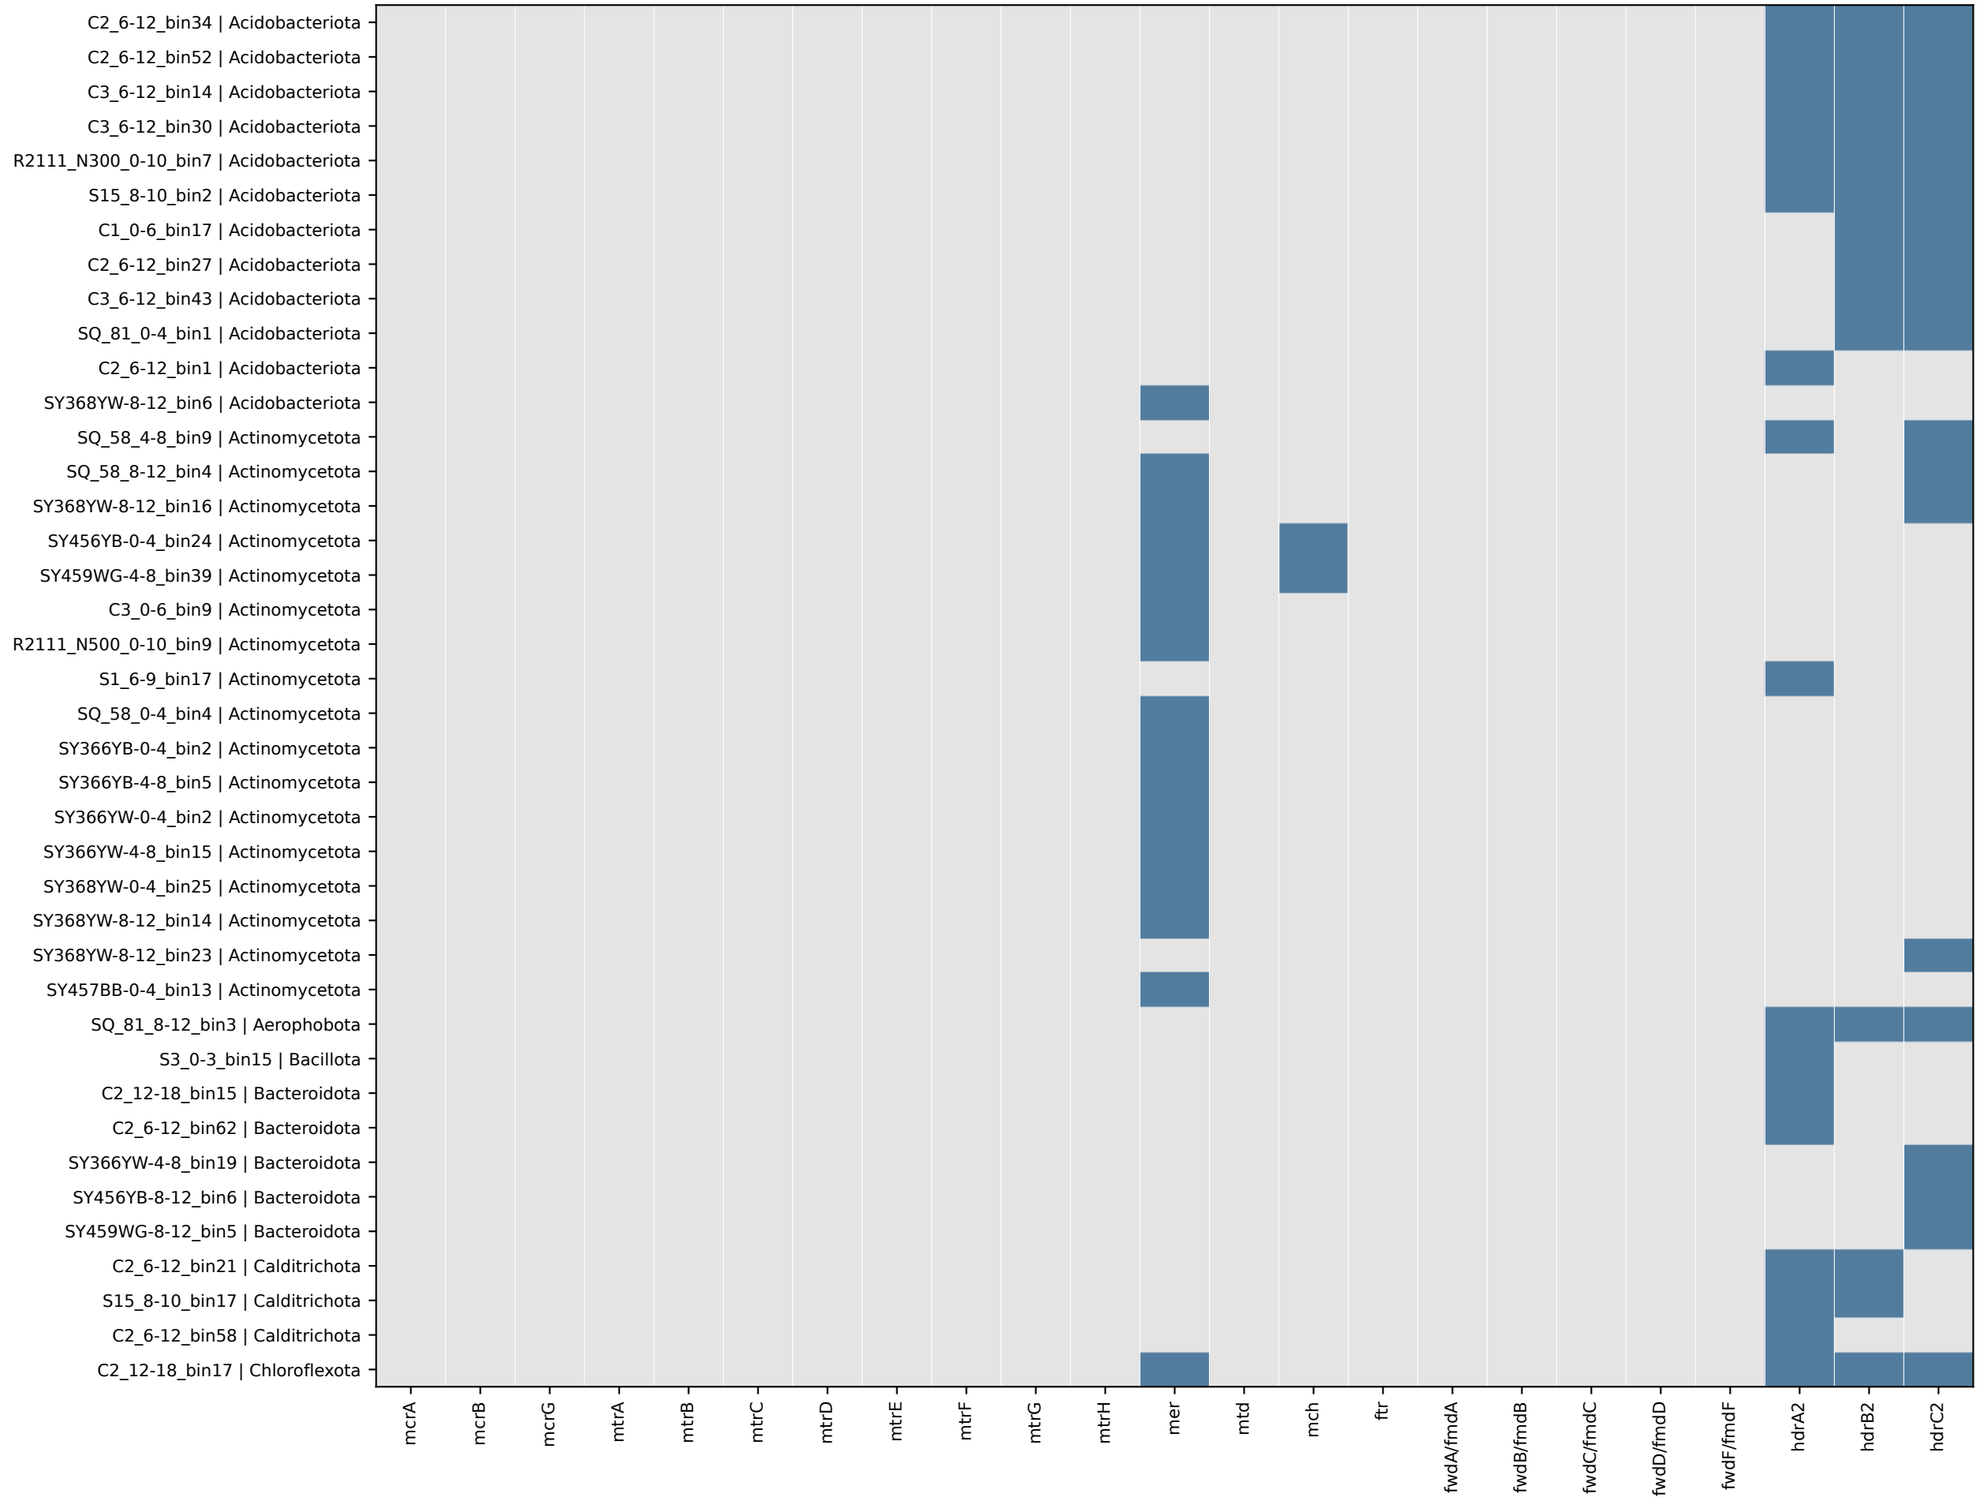
Blue = detected; grey = not detected. Any of 23 genes qualifies as a carrier; this does not identify an ANME or a complete methane pathway.

All target-gene carriers: 41–80 of 347 (gene detection, no tree)



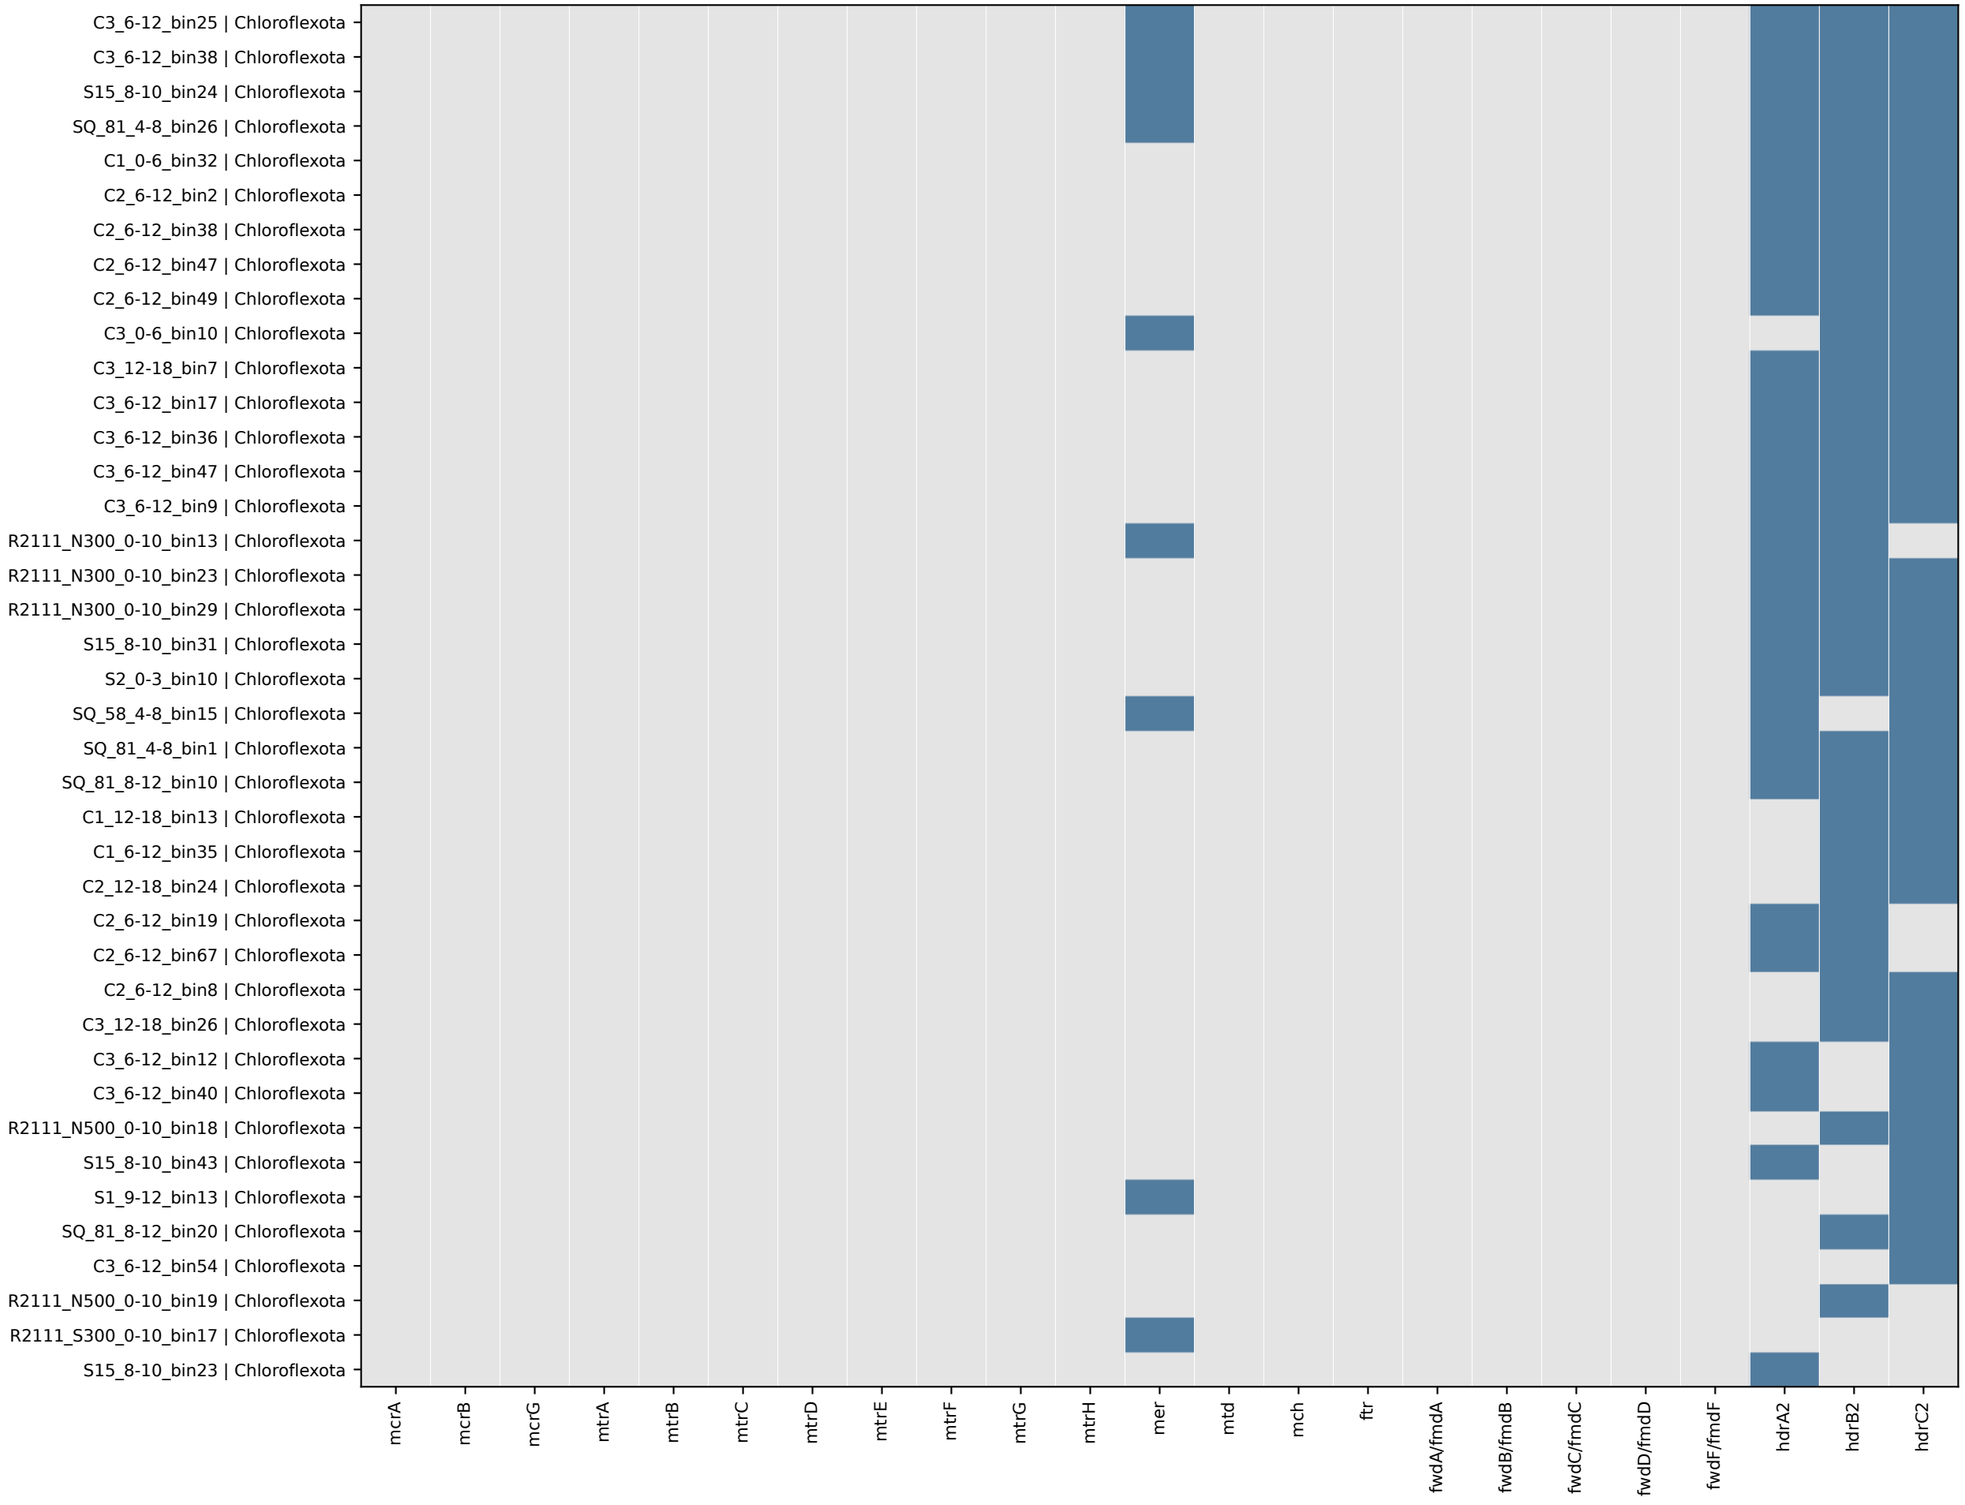
Blue = detected; grey = not detected. Any of 23 genes qualifies as a carrier; this does not identify an ANME or a complete methane pathway.

All target-gene carriers: 81–120 of 347 (gene detection, no tree)



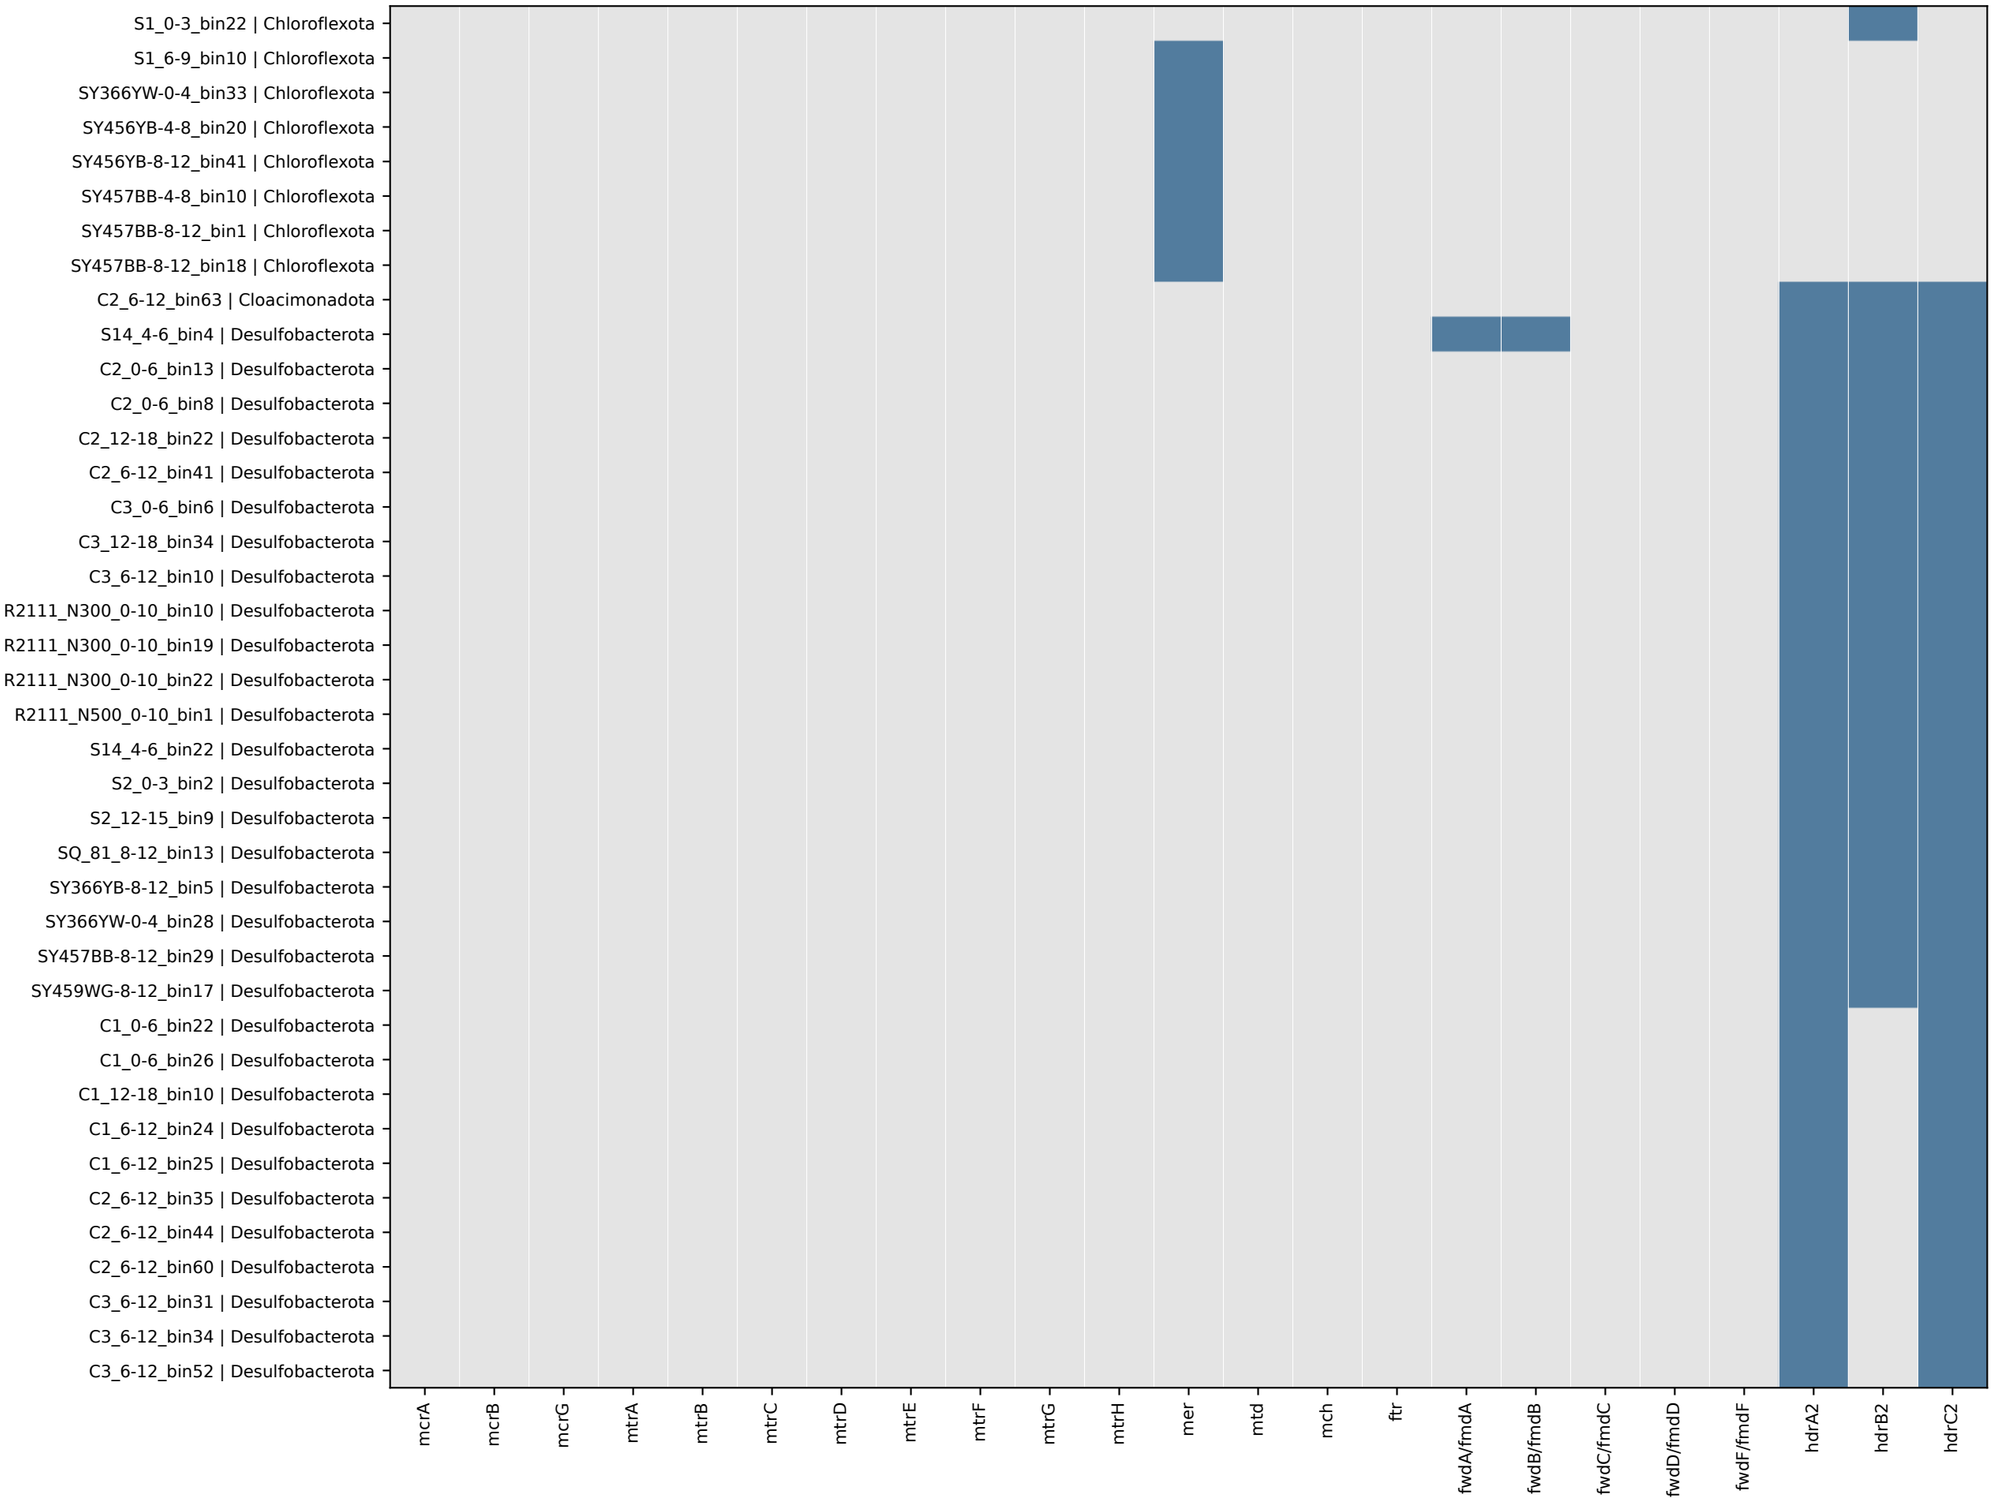
Blue = detected; grey = not detected. Any of 23 genes qualifies as a carrier; this does not identify an ANME or a complete methane pathway.

All target-gene carriers: 121–160 of 347 (gene detection, no tree)



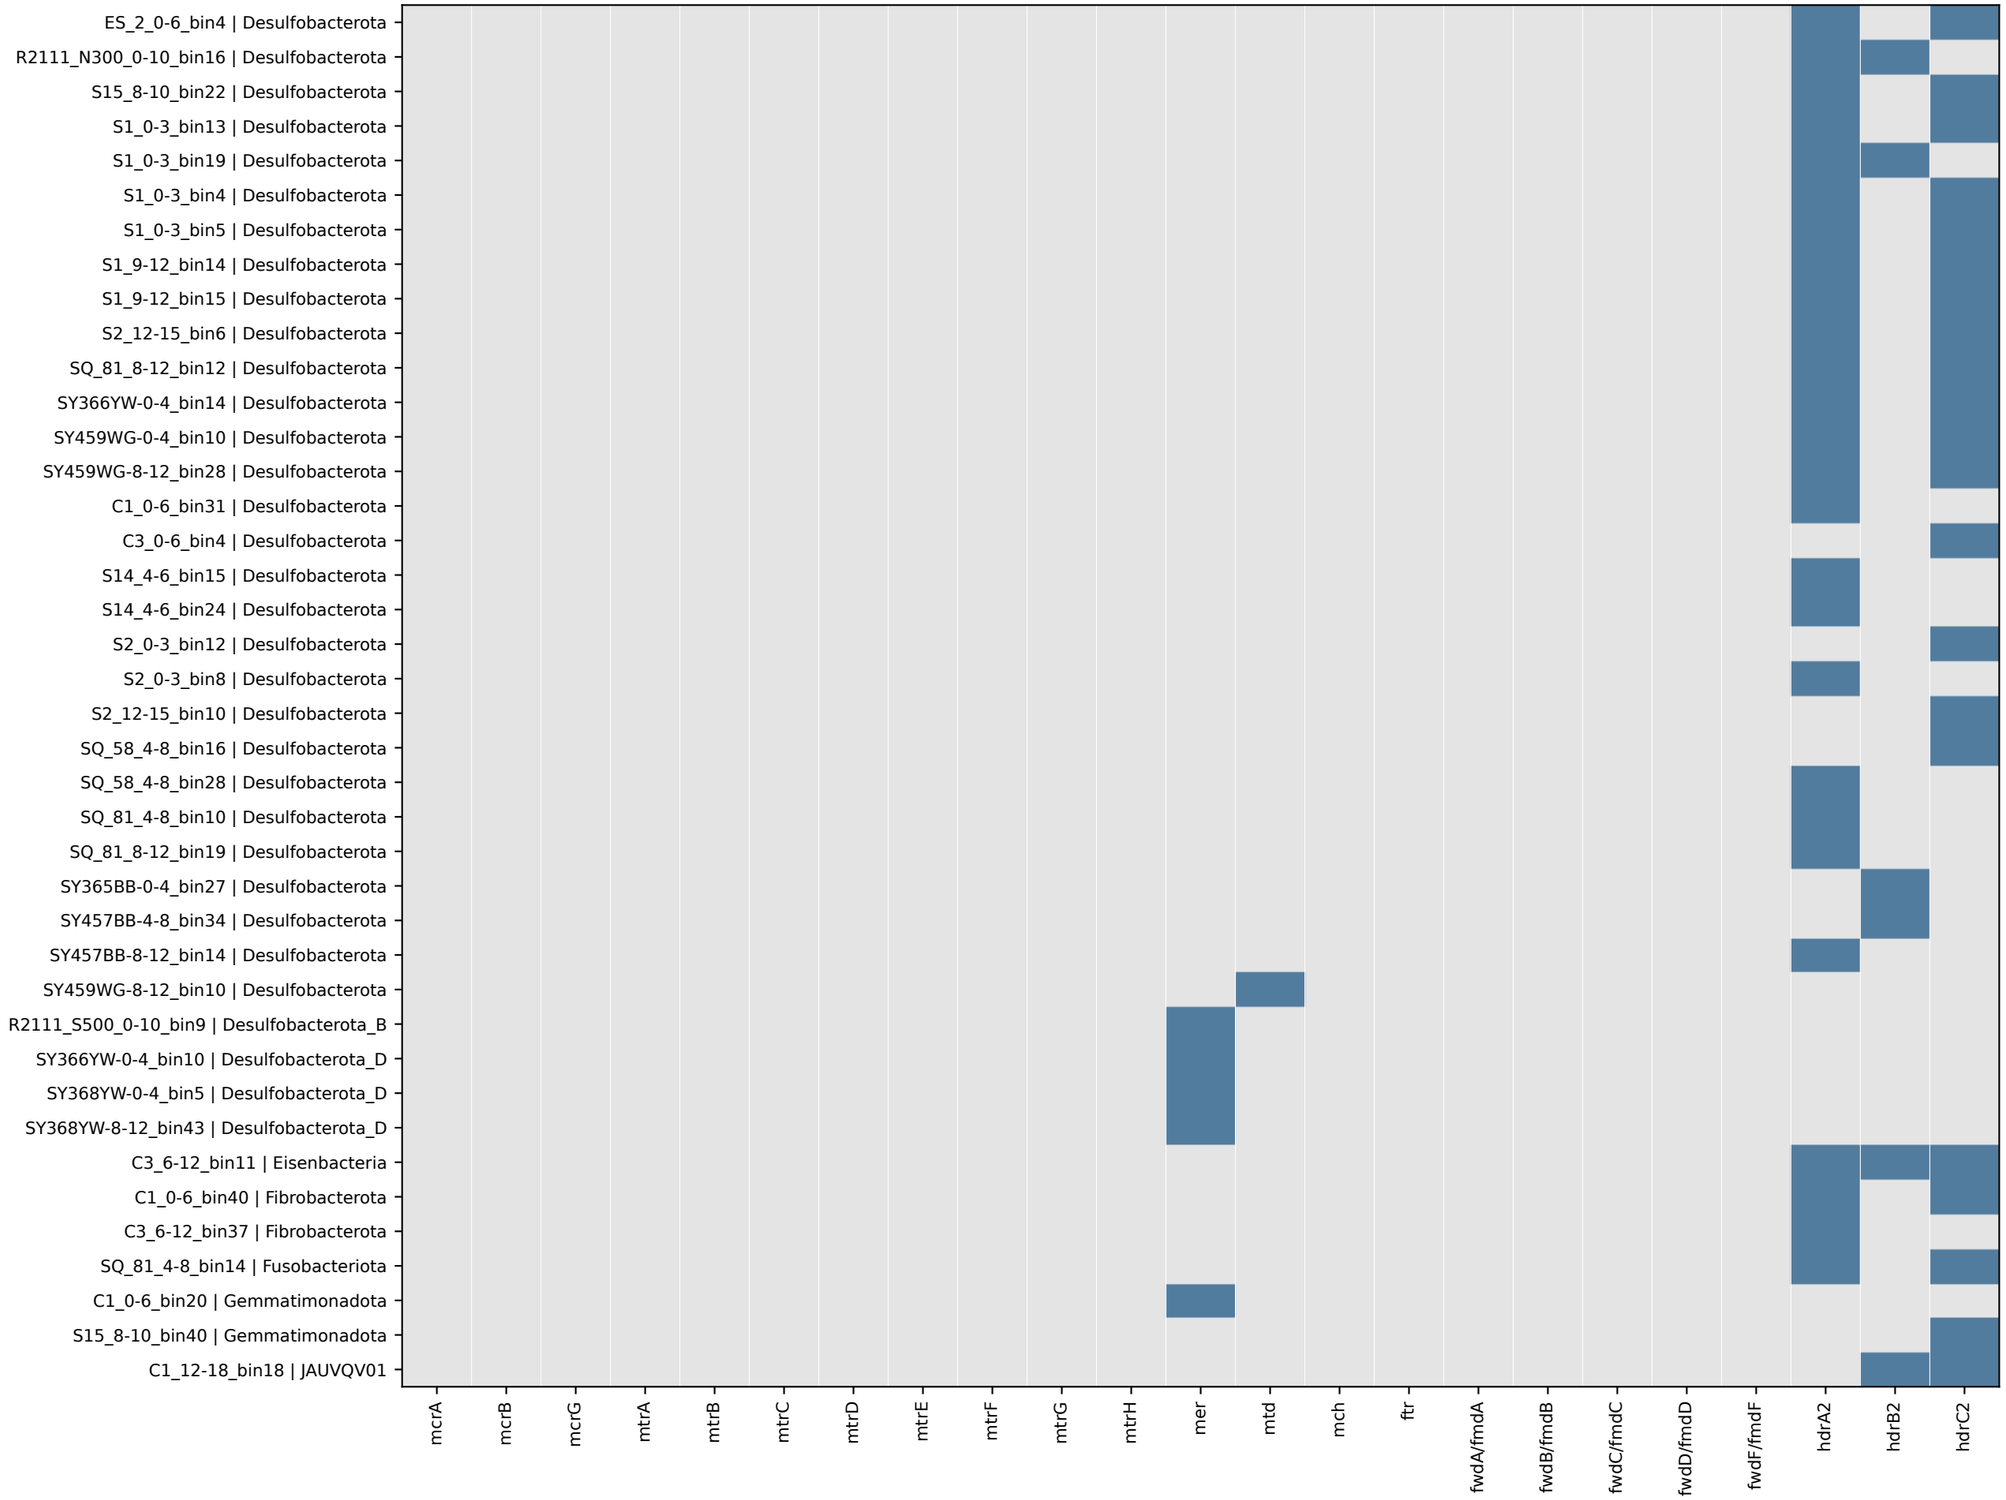
Blue = detected; grey = not detected. Any of 23 genes qualifies as a carrier; this does not identify an ANME or a complete methane pathway.

All target-gene carriers: 161–200 of 347 (gene detection, no tree)



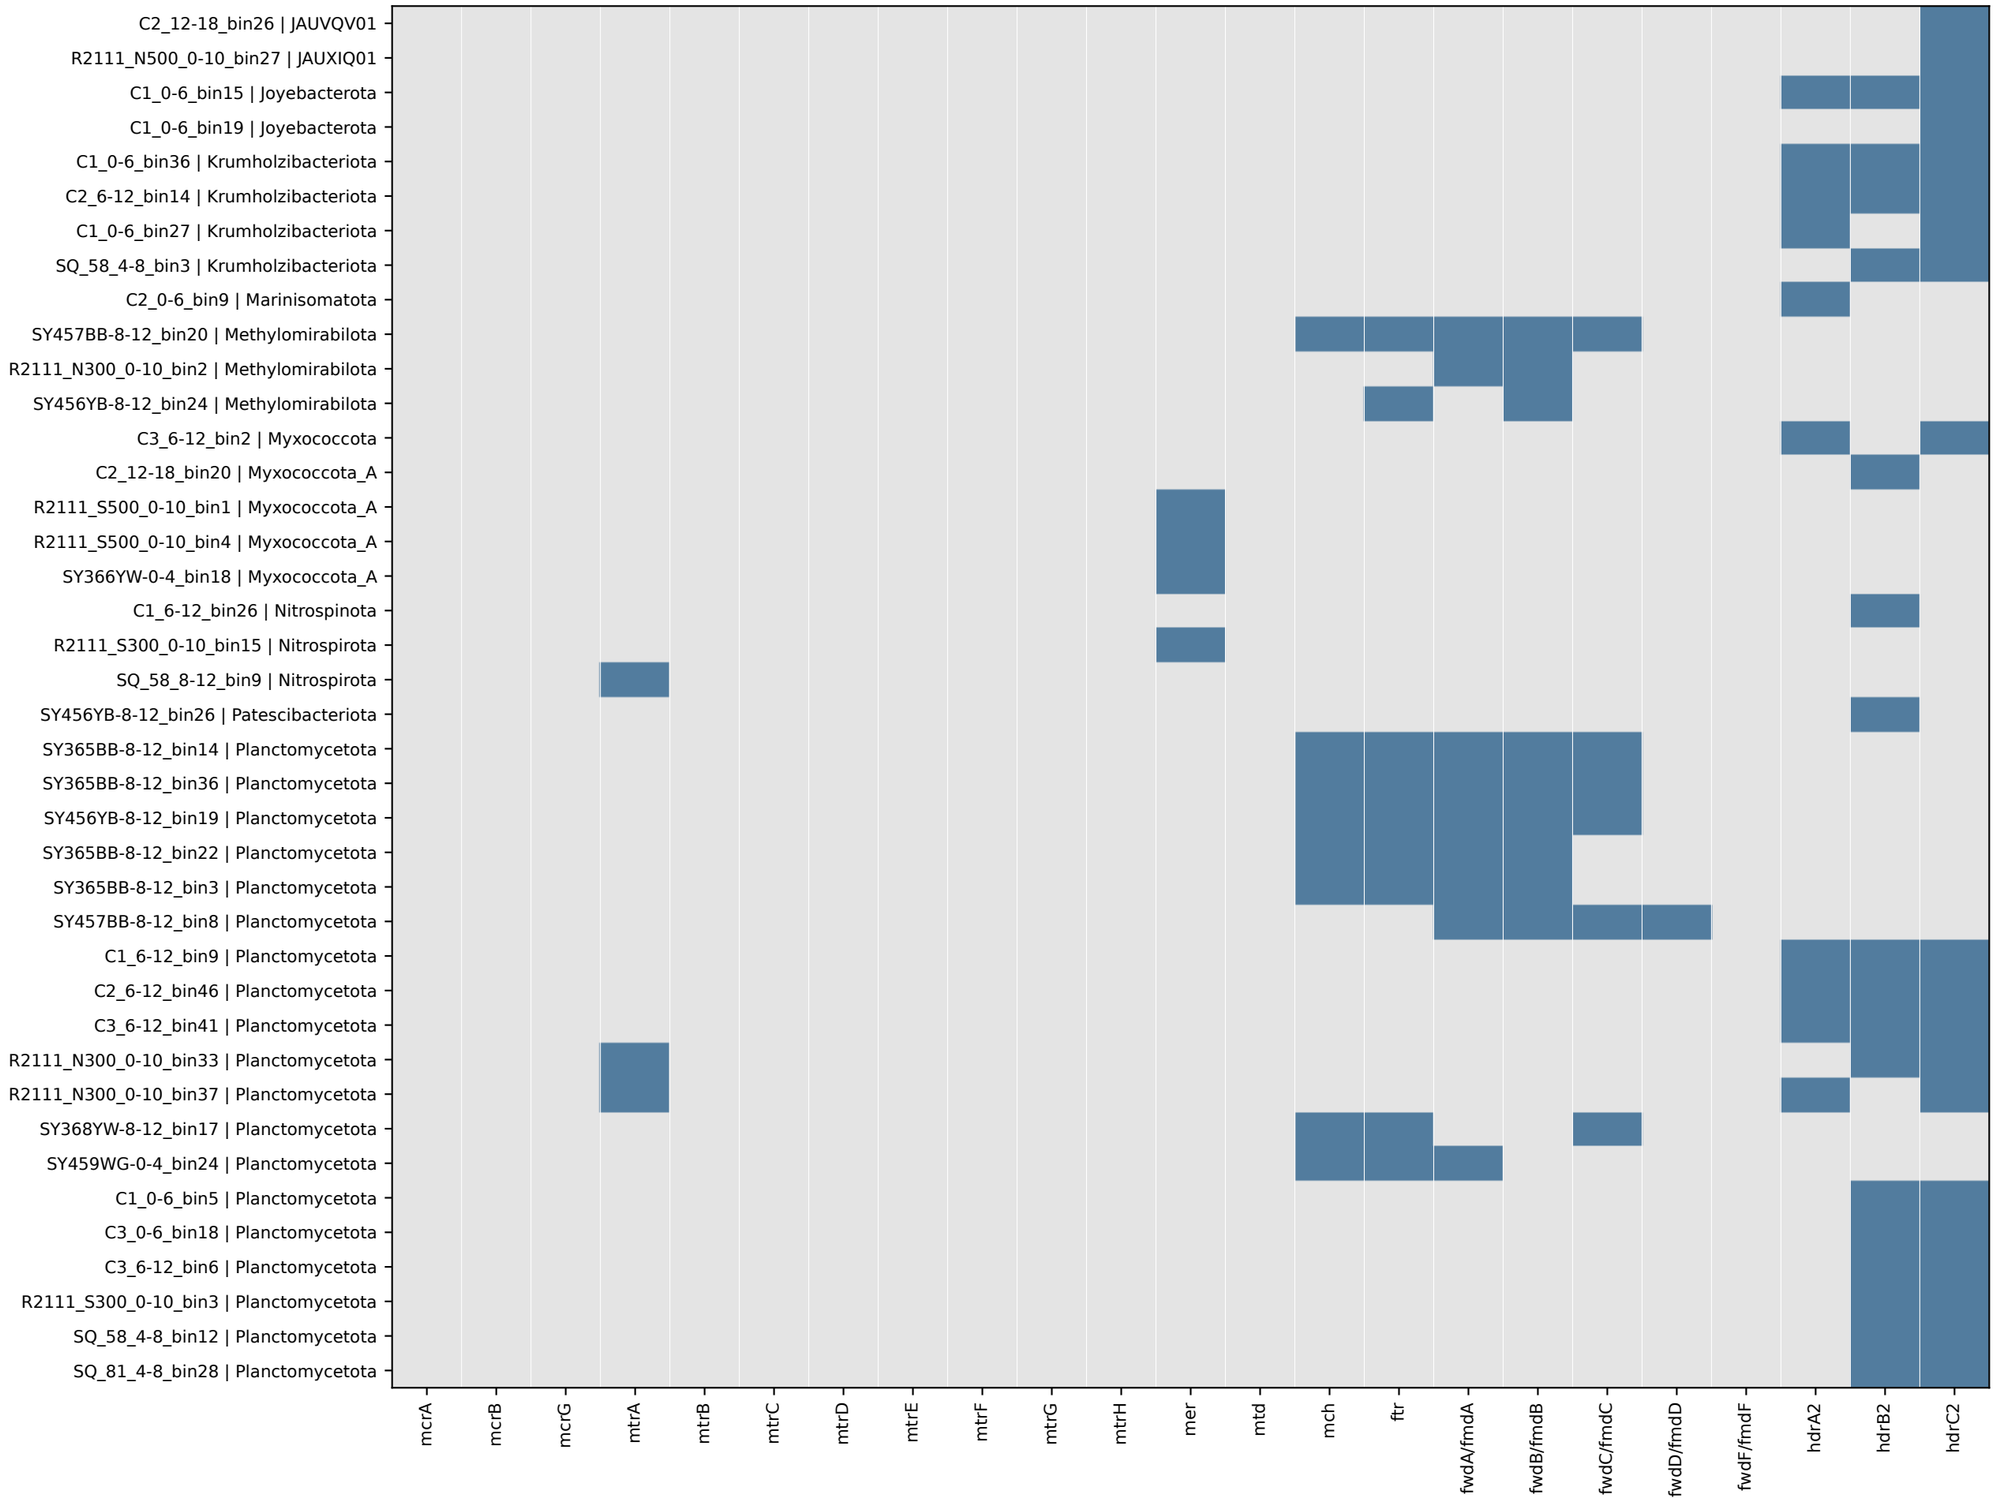
Blue = detected; grey = not detected. Any of 23 genes qualifies as a carrier; this does not identify an ANME or a complete methane pathway.

All target-gene carriers: 201–240 of 347 (gene detection, no tree)



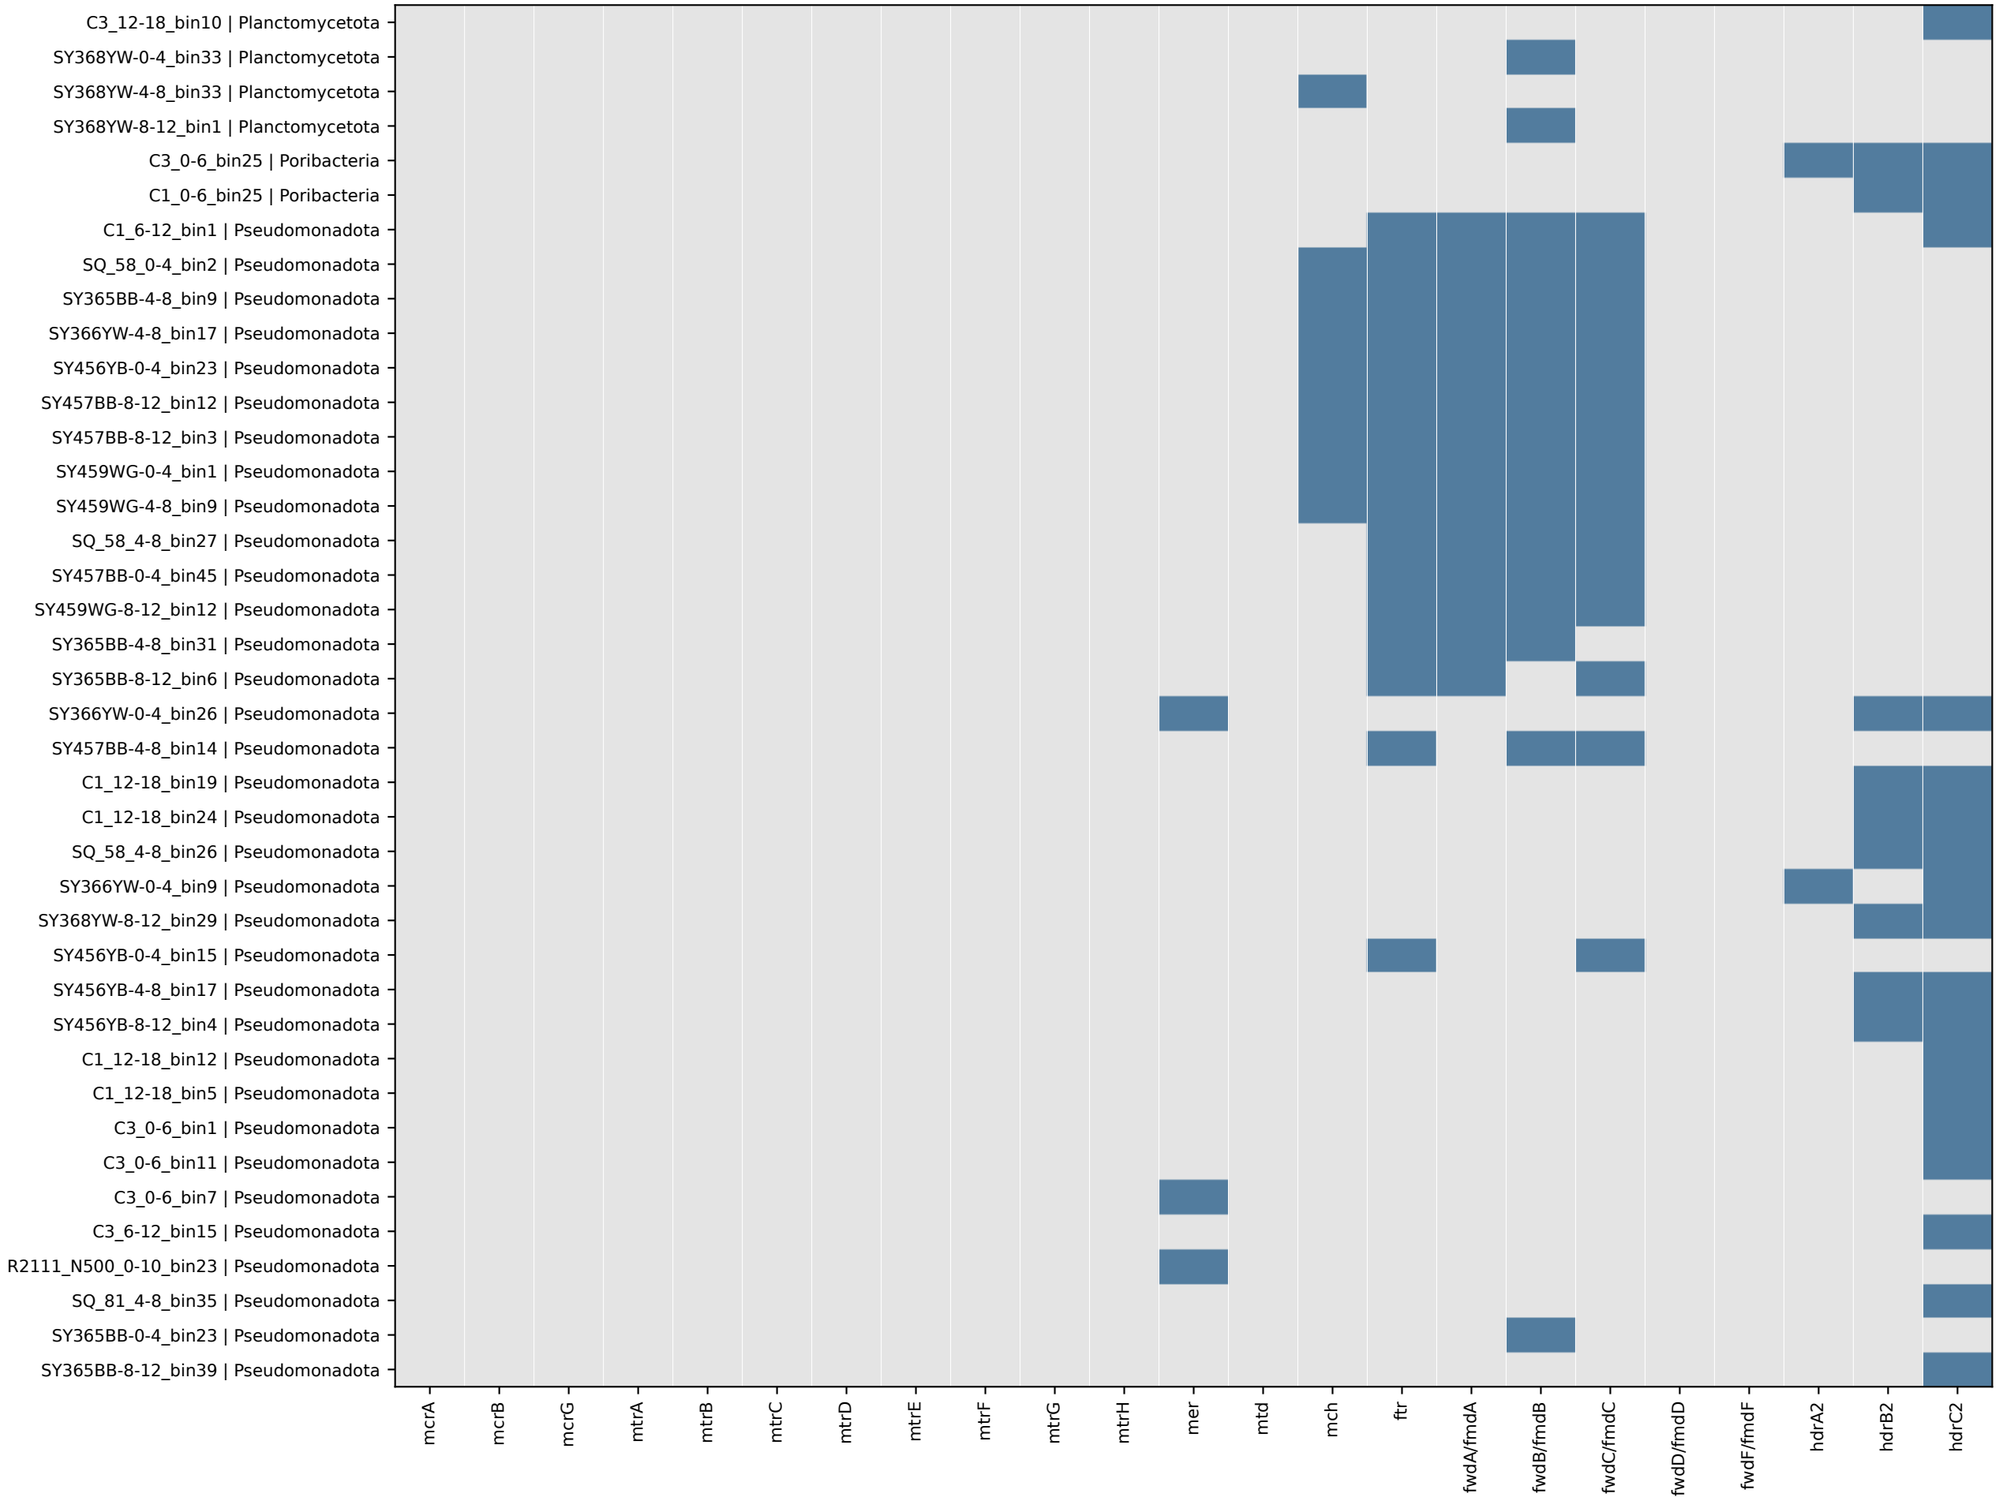
Blue = detected; grey = not detected. Any of 23 genes qualifies as a carrier; this does not identify an ANME or a complete methane pathway.

All target-gene carriers: 241–280 of 347 (gene detection, no tree)



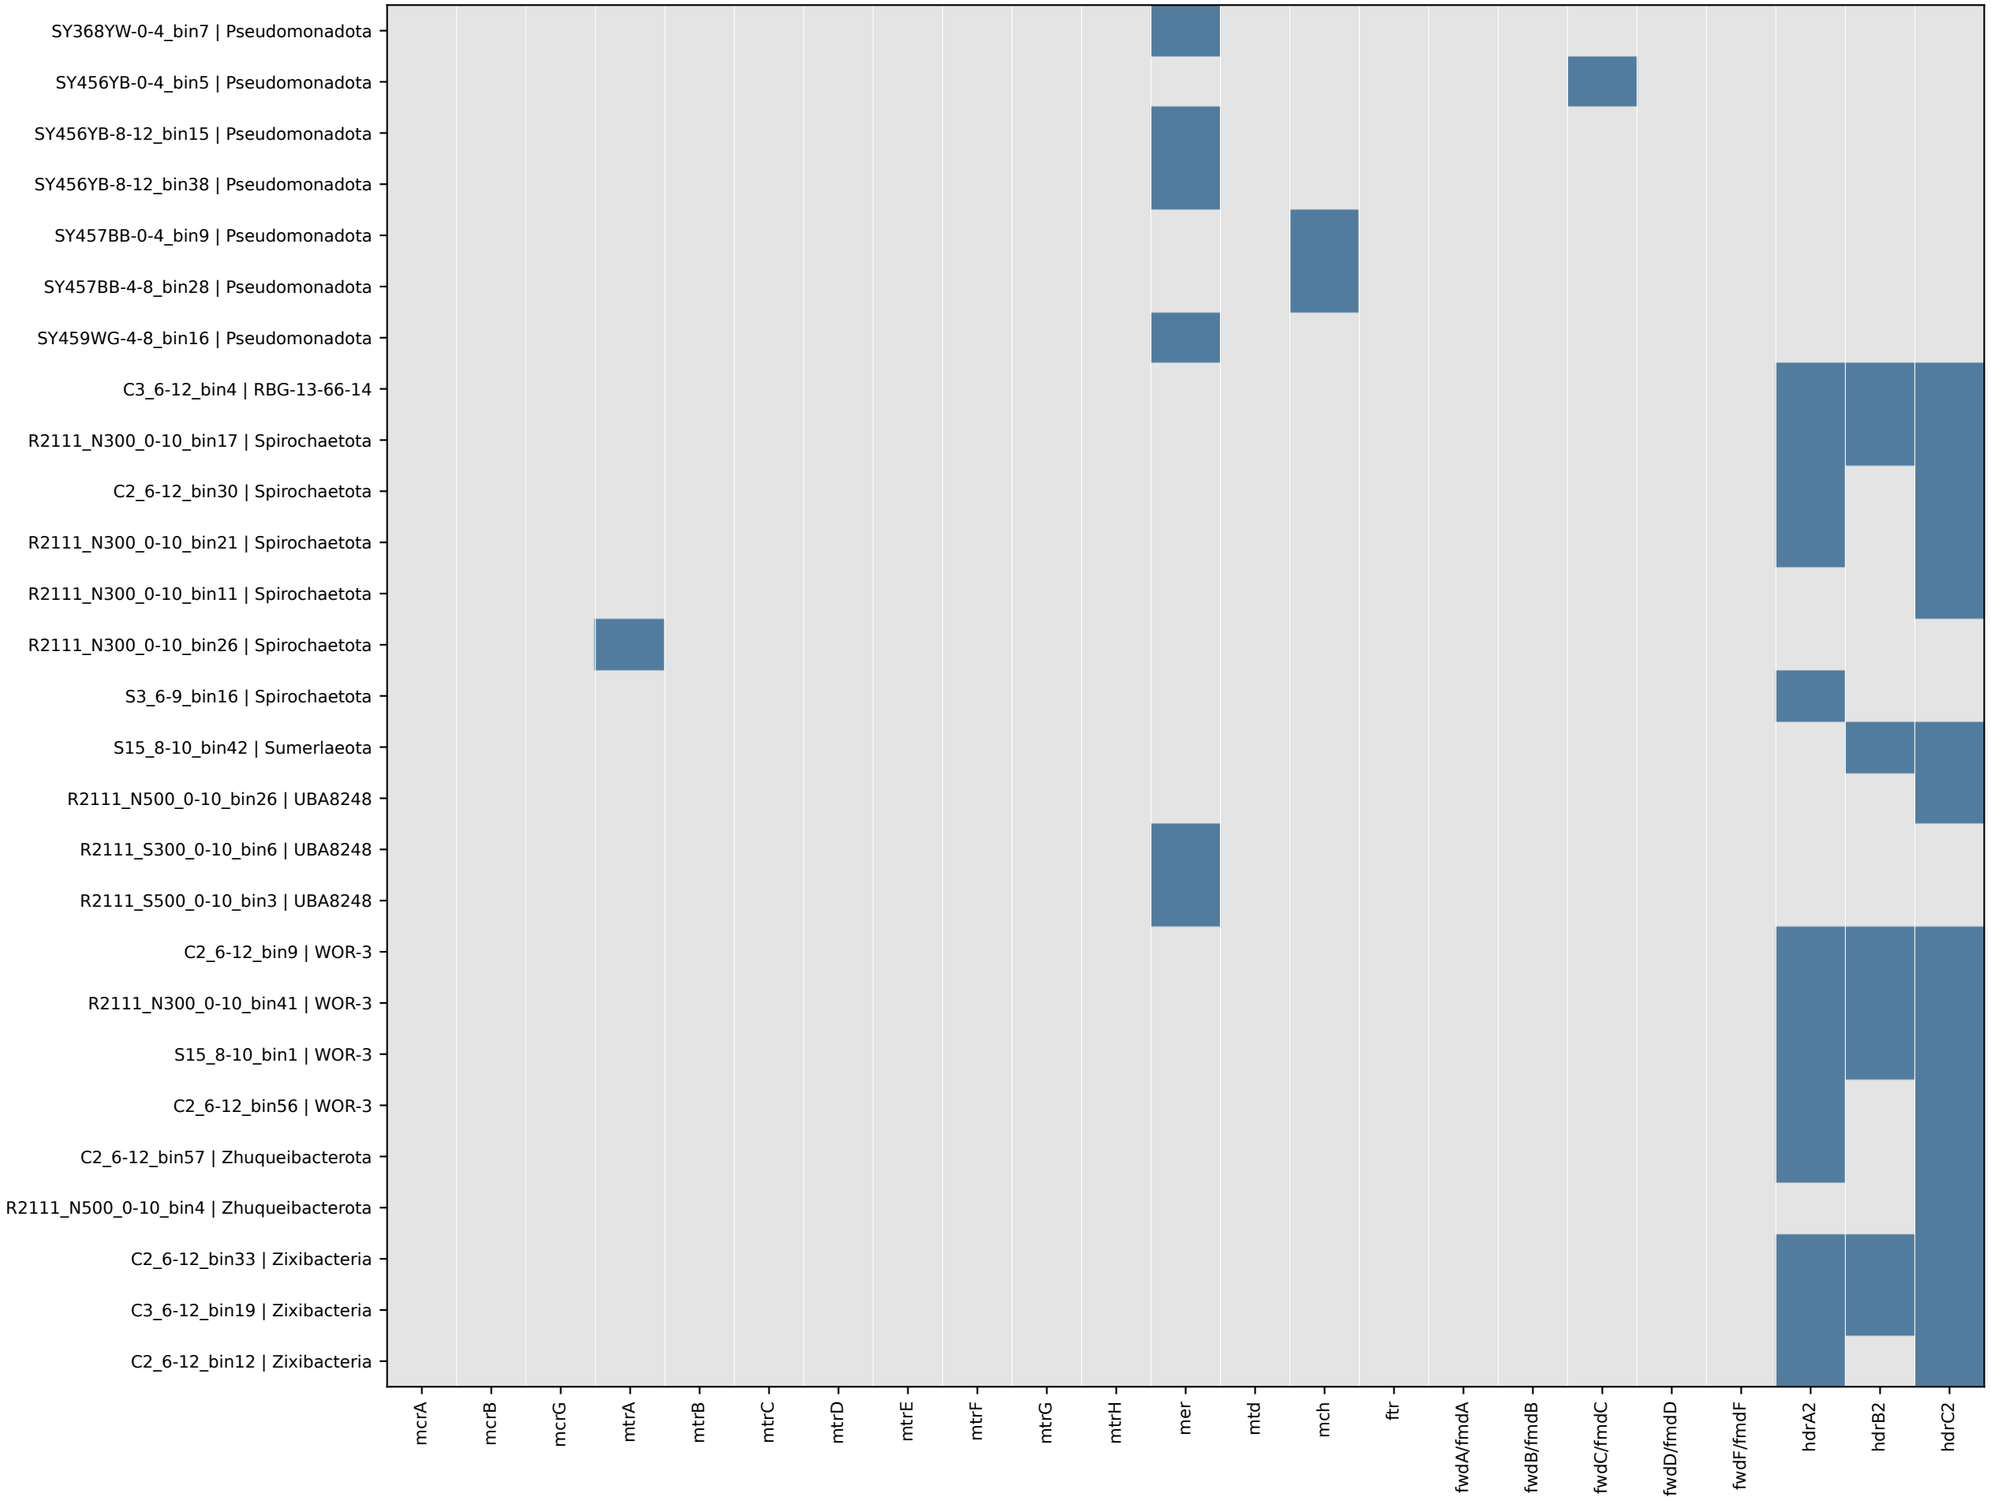
Blue = detected; grey = not detected. Any of 23 genes qualifies as a carrier; this does not identify an ANME or a complete methane pathway.

All target-gene carriers: 281–320 of 347 (gene detection, no tree)



Blue = detected; grey = not detected. Any of 23 genes qualifies as a carrier; this does not identify an ANME or a complete methane pathway.

All target-gene carriers: 321–347 of 347 (gene detection, no tree)



Blue = detected; grey = not detected. Any of 23 genes qualifies as a carrier; this does not identify an ANME or a complete methane pathway.
